CENTER FOR
WOUND HEALING

We Offer Multidisciplinary Diagnosis, Treatment, Education and Support to Foster Wound Healing.

If you or someone you know is suffering from a sore or wound that won't heal, you should ask your doctor about Clovis Community Center for Wound Healing.

Every year, healing resistant wounds caused by diabetes, poor circulation, or other health-related disorders, keep three to five million Americans from doing the things they love.

Our doctors and nurses are specially trained in treating wounds; including many that have resisted healing after months and even years of traditional treatment.

Thanks to our personalized approach to medical and surgical care, as well as our advanced wound care technology, most patients can expect healing within just a few months.

Providing advanced wound care.

Lower extremity diabetic wounds

Ulcers from poor circulation

Venous stasis ulcers

Surgical wounds

Pressure sores

Resistant bone infections

Radiation injury

What is Hyperbaric Oxygen Therapy (HBOT)?

HBOT is a medical treatment given in a comfortable, climate-controlled, see-through chamber.

"Hyperbaric" means more than the normal atmospheric pressure. Most treatments are given at two to three times normal pressure. In addition, the normal 21 percent oxygen in the air that we breathe is increased to 100 percent oxygen.

The combination of increased pressure and 100 percent oxygen significantly increases the amount of oxygen in the bloodstream. The higher levels of oxygen in the bloodstream may provide several of these benefits:

- Preservation of injured tissue
- Improved delivery of oxygen to injured tissue
- Improved wound healing
- Improved control of certain infections
- Improved growth of new blood vessels
