2024 Trauma Report

Trauma Annual Report

Community Regional Medical Center

UCSF Fresno

Introduction

Community Regional Medical Center is located in downtown Fresno,
California, and is home to a Level I
Trauma Center, which is the highest distinction verified by the American
College of Surgeons.

The trauma center has 24 hours, 7 days a week coverage by 12 surgeons board certified in surgery and critical care. Patients are treated through a multi-disciplinary approach involving advanced practice personnel, nurses, respiratory, physical, speech, and occupational therapists, social workers, dietitians, and pharmacists.

In addition to caring for patients, trauma center personnel strive to educate healthcare professionals throughout the Central Valley in the care of trauma patients. This includes education for nurses, physicians, and overall education for rural healthcare facilities that might be the first to receive and stabilize injured patients.

One major component of being a trauma center is educating the public on preventing injuries. Our institution has many outreach programs for the public, including: Matter of Balance, Impact Teen Drivers, Stop the Bleed, and Violence Intervention and Prevention program.

The treatment of trauma patients is constantly evolving in order to improve outcomes, which is made possible through research.

Community Regional Medical Center has a robust trauma research program with many different areas of study. This research is published in peer-reviewed medical journals and presented at national and international conferences to share results with other trauma practitioners and advance the knowledge of caring for trauma patients.

Level I Trauma Centers in California

Community Regional Medical Center is located in downtown Fresno, California. It serves a 15,000-square-mile service area as the only Level I Trauma Center between Los Angeles and Sacramento.

Blood Transfusion

Total number of trauma patients given blood:

Within 4 hours of arrival - 300

Within 24 hours of arrival - 383

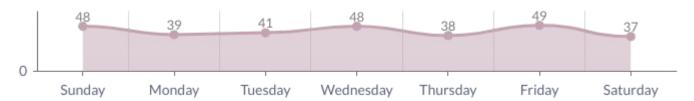

Top 6 Mechanism of Injury: Blood given within 4 hours

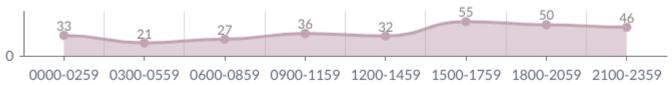

Trauma Patients given blood within 4 hours of Arrival by Month

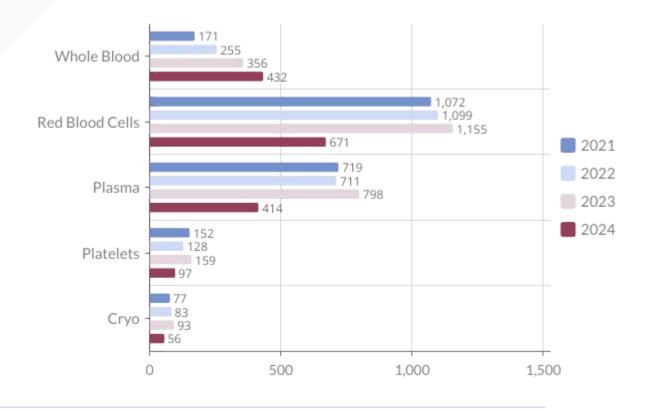

Trauma Patients given blood within 4 hours of Arrival by Day of the Week

Trauma Patients given blood within 4 hours of Arrival by Time

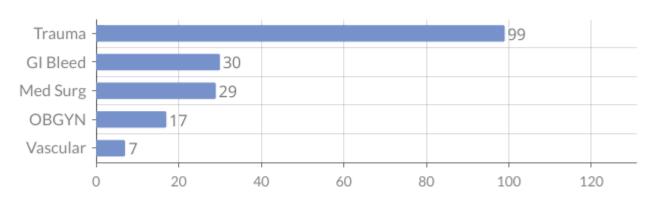

Total Blood Units Given Within 4hrs of Arrival: 2021-2024

Massive Transfusion Protocol (MTP) is a coordinated, rapid-response system designed to deliver large volumes of blood products to patients experiencing life-threatening hemorrhage. In 2024, Community Regional Medical Center had **183** MTPs.

MTPs given by Admitting Service

Trauma Education

Advanced Trauma Care for Nurses (ATCN)

Provides the registered nurse with increased knowledge in managing the trauma patient and includes a hands-on, scenario-based approach

Trauma Nurse Core Course (TNCC)

Delivers the knowledge, critical thinking skills, and hands-on training needed to keep trauma patients safe

Advance Trauma Life Support (ATLS)

Provides a safe and reliable method for immediate management of injured patients including resuscitation, stabilization, and determining if the needs of the patient exceed those of the facility

Advanced Surgical Skills for Exposure in Trauma (ASSET)

Uses human cadavers to teach surgical exposure of anatomic structures that, when injured, may pose a threat to life or limb

Rural Trauma Team Development Course (RTTDC)

Emphasizes the initial evaluation and resuscitation of the trauma patient at a rural facility to assist healthcare professionals with determining the need to transfer the patient to a higher level of care

Central California Trauma Symposium

Educates healthcare providers on current trends in trauma and critical care management in the prehospital, emergency, and ICU settings

Pediatric Trauma Across the Care Continuum (PTACC)

Provides education to nurses who care for admitted pediatric trauma patients. The content was designed to close the identified educational gap for this group

TraumaResearch

The trauma surgeons have a variety of research interests and develop their own studies, as well as participate in multi-institutional studies with other organizations from around the country. Our residents, fellows, and faculty frequently present research at national and international conferences, including the American Association for the Surgery of Trauma, Southwestern Surgical Congress, Western Trauma Association, Society for Critical Care Medicine, and the American College of Surgeons. Below are several publications for 2024:

- Aryan, N., Grigorian, A., Tay-Lasso, E., Cripps, M., Carmichael, H., McIntyre Jr, R., ... & Nahmias, J. (2024). High-grade liver injuries with contrast extravasation managed initially with interventional radiology versus observation: A secondary analysis of a WTA multicenter study. The American Journal of Surgery, 234, 105-111.
- Ratnasekera, A. M., Seng, S. S., Kim, D., Ji, W., Jacovides, C. L., Kaufman, E. J., ... & Ferrada, P. (2024). Propensity weighted analysis of chemical venous thromboembolism prophylaxis agents in isolated severe traumatic brain injury: An EAST sponsored multicenter study. Injury, 55(9), 111523.
- LaGrone, L. N., Stein, D., Cribari, C., Kaups, K., Harris, C., Miller, A. N., ... & Napolitano, L. M. (2024). American Association for the Surgery of Trauma/American College of Surgeons Committee on Trauma: Clinical protocol for damage-control resuscitation for the adult trauma patient. Journal of Trauma and Acute Care Surgery, 96(3), 510-520.
- Lui, A., Bonney, P. A., Burke, J., Kanter, J. H., Yue, J. K., Takegami, N., ... & DiGiorgio, A. M. (2024). The correlation of neurosurgery motor examinations with ISNCSCI motor examinations in patients with spinal cord injury: a multicenter TRACK-SCI study. Journal of Neurosurgery: Spine, 42(1), 120-128.
- Cooper, R. J., Akie, T. E., Gujral, T., Rana, S., Bui, K., Factora, R., ... & Mower, W. R. (2024). Traumatic injury to the posterior fossa: a secondary analysis and description of case series from the NEXUS head injury dataset. The Lancet Regional Health–Americas, 34.
- Lilienstein, J., Lowry, D., Long, A., Kaups, K., Chan-Golston, A., Gallegos, J., ... & Davis, J. Don't break the (blood) bank: Can waste be minimized in a whole blood program?. The American Journal of Surgery, 240, 116082.
- Kaups, K. L. (2024). Surgical critical care certification: generally speaking—it's thriving!. Trauma Surgery & Acute Care Open, 9(1).

Trauma Injury Prevention

Because traumatic injuries are frequently preventable, injury prevention is aimed at educating the public and reducing the number of injuries within the community.

Injury prevention activities and courses include:

- Matter of Balance
 Teaches strategies to help older adults reduce their fear of falling and increase activity levels
- Pediatric Injury Prevention
 Child passenger safety education, pedestrian, and water safety
- Impact Teen Drivers
 Raises awareness among teens to reduce auto collisions due to reckless and distracted driving
- Stop the Bleed
 Teaches the public how to quickly stop blood loss in an emergency
- Violence Intervention and Prevention
 Outreach to victims of gang violence to prevent recurrence

Stop the Bleed

TraumaSymposium

May 17, 2024

The 10th Annual Central California
Trauma Symposium was highly
successful, with strong attendance and
participation. 229 attendees received
CME credits and 21 exhibitors
participated in the event. In all, 294
people attended the symposium.

TraumaReunion

November 2, 2024

21 trauma survivors and their loved ones attended the event. We had a total of 120 attendees this year including nurses, doctors, PA, PT, RT, and the trauma program.
